Attachment 2 - Ranking of All Available Depth of Water Measurements for USGS Streamgage 09484550 for Period of Record 2001-2013

		Percent of time this depth of water	
		is not exceeded. This also is the	
		percent of time that the stream	
		would be dry if drawdowns equal to	
		the depth of water were	
		superimposed. For depths of water	
		that have multiple entries (i.e.,	Average dry days per
	Percent of time this	occurred multiple days during the	year, if drawdown equal
	depth of water is	period of record), the percentage	to the depth of water
Depth of Water	exceeded	used for the analysis is highlighted	were superimposed

Attachment 2 - Ranking of All Available Depth of Water Measurements for USGS Streamgage 09484550 for Period of Record 2001-2013

	T		
		Percent of time this depth of water	
		is not exceeded. This also is the	
		percent of time that the stream	
		would be dry if drawdowns equal to	
		the depth of water were	
		superimposed. For depths of water	
		that have multiple entries (i.e.,	Average dry days per
	Percent of time this	occurred multiple days during the	year, if drawdown equal
	depth of water is	period of record), the percentage	to the depth of water
Depth of Water	exceeded	used for the analysis is highlighted	were superimposed

Attachment 2 - Ranking of All Available Depth of Water Measurements for USGS Streamgage 09484550 for Period of Record 2001-2013

Percent of time this depth of water is not exceeded. This also is the percent of time that the stream would be dry if drawdowns equal to the depth of water were superimposed. For depths of water that have multiple entries (i.e., and it is depth of water is occurred multiple days during the period of record), the percent government of the analysis is highlighted were superimposed of the analysis is highlighted were superimposed of 7.2% 245 245 245 245 245 245 245 245 245 245		T		
Is not exceeded. This also is the percent of time that the stream would be dry if drawdowns equal to the depth of water were superimposed. For depths of water that have multiple entries (i.e., volume 1) and the depth of water is continued to the depth of water is depth of water is exceeded water i				
Percent of time that the stream would be dry if drawdowns equal to the depth of water were superimposed. Attachment 2 - Ranking of All Available Depth of Water Measurements for USGS Streamgage 09484550 for Period of Record 2001-2013

		Percent of time this depth of water	
		is not exceeded. This also is the	
		percent of time that the stream	
		would be dry if drawdowns equal to	
		the depth of water were	
		superimposed. For depths of water	
		that have multiple entries (i.e.,	Average dry days per
	Percent of time this	occurred multiple days during the	year, if drawdown equal
	depth of water is	period of record), the percentage	to the depth of water
Depth of Water	exceeded	used for the analysis is highlighted	were superimposed

Attachment 2 - Ranking of All Available Depth of Water Measurements for USGS Streamgage 09484550 for Period of Record 2001-2013

		Percent of time this depth of water	
		is not exceeded. This also is the	
		percent of time that the stream	
		would be dry if drawdowns equal to	
		the depth of water were	
		superimposed. For depths of water	
		that have multiple entries (i.e.,	Average dry days per
	Percent of time this	occurred multiple days during the	year, if drawdown equal
	depth of water is	period of record), the percentage	to the depth of water
Depth of Water	exceeded	used for the analysis is highlighted	were superimposed
